Website:	www.timetodare.com or http://elearn.mtsac.edu/abirca/			
Office:	Building 40 – Room 145			
Office hours:	TTh: 2:15 – 2:50 pm & 4:15 – 5:25 pm			
	F: 11:00 – 11:30 am			
Text:	Thomas' Calculus Early Transcendentals (11th Edition) by Thomas, Weir, Hass, Giordano			
Section	TTh #114581 12:10 – 2:15 pm (40 – 109); #114590 7:15 – 9:20 pm (40 – 102)			

Course Objectives

This course studies the meaning, computation and application of the derivative with an introduction to the integral. Topics include the definition of the derivative, limits, rules for differentiating polynomial, rational, exponential, logarithmic and trigonometric functions, applications of the derivative, and an introduction to the definite integral. Upon completion of this course, the student will be able to:

- Develop an intuitive understanding of the limit through the use of tables, graphs, and formulas.
- Understand the definition of continuity and differentiability particularly as they apply to the Mean Value Theorem.
- Understand the definition of a derivative as an instantaneous rate of change and use the finite difference quotients to approximate the derivative numerically.
- Interpret the derivative as the slope of a tangent line and use this interpretation to approximate the derivative function graphically.
- Compute derivatives analytically using product, quotient, chain rules, or implicit differentiation.
- Apply first and second derivatives to find relative extrema and points of inflection.
- Recognize and use derivatives to solve rate of change problems, answer optimization questions and graph functions.
- Understand the definition of the definite integral as a limit of Riemann sums and use the definition to approximate the definite integral numerically.
- Compute antiderivatives of elementary functions.
- Interpret the definite integral as area and use this interpretation to approximate the definite integral graphically or numerically.
- Interpret the definite integral of a rate of change as the total change in original function and use to state the First Fundamental Theorem of Calculus.
- Apply studied principles and skills to new situations in addition to situations that mirror those on the homework and those shown in class.

Methods of Instruction

This course will combine lecture, teamwork, and class discussion. Students will be required to do homework, group problems, quizzes and examinations.

Attendance and Participation

Understanding math requires more than just reading a textbook. Listening and participating in the class activities are as important as solving problems. College policy requires that you attend every class meeting. Moreover, I do notice when you do not show up. If your grade is on a borderline, those with regular attendance are more likely to be on the higher side of the line. In addition, you miss the material from that day and that day's quiz. Do not be late to class. The homework is due at the beginning of the class. You may also miss the quiz if you are late. NOTE: You the student are responsible for dropping the course should you decide not to continue in it. If you stop attending and doing the work and you fail to drop, you will receive a failing grade in this course. You may be dropped from this class if you miss class during the first 2 weeks of instruction. Your seat will be given to a student who has been attending each day.

Pre requisites

There is an official prerequisite for this course (Math 160 – Precalculus), and I expect that you demonstrate college algebra and trigonometry skills. It is your responsibility to know the prerequisite material.

Study time & Extra help

You are expected to study two hours outside class for every hour in class. This means at least eight hours per week on homework for this class. If you have trouble completing assignments or understanding the mathematics, get help as soon as you need it. My office hours and email are listed above. Free tutorial services are available in the Learning Assistance Center, Building 6, room 101. Tel: 909-594-5611 x 4300 and in building 40 (math).

Late Work

Be prepared with all assignments on the day they are due. As a rule, I do not accept late written work nor are there any make up tests or quizzes.

Academic Honesty

Plagiarism or cheating will not be tolerated. There will be a zero on the assignment and risk failing the course.

Calculators

A graphing calculator will be necessary for some of the problems. Maple software will be needed for other home problems, as well as for the Activity Lab assignments. If you have a phone or pager, please turn it to vibrate and sit close to the door in case you need to use it in an emergency. Thank you.

Organization, Grading and Requirements

You will need a 3-hole binder with 3 separators, labeled as follows: LECTURES HOMEWORK TESTS & QUIZZES

- LECTURES Pay attention in class to what I say and do, and make careful notes. In particular, note the
 problems I work on the board, and copy the complete solutions as well as the theory presented in each section.
 Work as neatly as you can. Write your symbols clearly, and make sure the exercises are clearly separated from
 each other. Do not hesitate to ask questions in class. It is not a sign of weakness, but of strength. There are
 always other students with the same question who are too shy to ask.
- **HOMEWORK** Before you start on homework assignments, rework the problems I worked in class as well as all examples from the textbook. This will reinforce what you have learned. Make sure you check your previous work against the solution sections posted on my website. Print out the solutions from my website for your reference.
- Keep all quizzes and tests that are returned to you in your binder. Use them when you study for future tests and for the final exam.

Assignments in the course are divided into five areas and are worth a total of 1000 points. Those earning 900 points or more will be awarded an A, 800 to 899 points a B, 700 to 799 points a C, 600 to 699 points a D and less than 599 points an F.

Homework 160 points

Homework and reading will be assigned each day. Homework will be collected nine times (see due dates on the Tentative Class Schedule). Staple each section separately, as I might collect and grade only some of the assigned sections. Homework is <u>due at the beginning of the class</u>. There will be some homework assignments on the computer, information for those assignments will follow. Each homework is worth 20 points. The lowest score will be dropped. Read carefully all the directions from the homework handout. Late homework will not be accepted for any reason with the following exception: you are allowed ONE grace period until the next class period for ONE assignment. You are encouraged to discuss assignments with your classmates; however, you are required to write up your work independently. Copied homework will not be tolerated and <u>identical</u>, or nearly <u>identical</u>, assignments will <u>share a</u> single homework score. I will make every effort to address homework questions in class as time permits. Please feel free to visit me during office hours, make an appointment with me, or contact me by email if you need additional help.

Quizzes 225 points*

Eleven quizzes will be given (see Tentative Class Schedule). They may be given at the beginning or at the end of the class. These quizzes will be given from <u>exercises and examples done in class</u> as well as <u>homework problems</u> assigned from the topics covered up to that point. For an exercise to be complete there needs to be a detailed solution to the problem. Do not just write down an answer. **No proof, no credit given!** Each quiz is worth 25 points. The lowest two scores will be dropped.

Tests 290 points*

Two tests will be given over the major areas addressed in the course. Each test is worth 145 points. For an exercise to be complete there needs to be a detailed solution to the problem. Do not just write down an answer. **No proof, no credit given!**

Activity Labs +50/-100 points*

A minimum of two Maple projects will be assigned during the semester. Information and due dates about them will follow. Each project is worth 25 points or – 50 (negative 50) if not done.

Comprehensive final 275 points*

The final is a 2 ½ hour exam and it is held on Tuesday, December 9th. The final is a cumulative exam. You may use the final exam percent score to replace your lowest test score (a test with a score of zero cannot be replaced by the final score). You must take the final to pass this class.

DATE		TOPICS	ASSIGNMENTS DUE
Tuesday	August 26	Chapter 1 (review)	
Thursday	August 28	Chapter 1 (review), 2.1	
Tuesday	September 2	2.1, 2.2	Quiz 1
Thursday	September 4	2.3, 2.4	Homework #1
Tuesday	September 9	2.5	Quiz 2
Thursday	September 11	2.6, 2.7	
Tuesday	September 16	3.1	Quiz 3, Homework #2
Thursday	September 18	3.2	
Tuesday	September 23	3.3, 3.4	Quiz 4
Thursday	September 25	3.5, 3.6	Homework #3
Tuesday	September 30	3.7, 3.8	Quiz 5
Thursday	October 2	3.9, 3.10	
Tuesday	October 7	Review	Quiz 6
Thursday	October 9	Test 1	Homework #4
Tuesday	October 14	4.1, 4.2	
Thursday	October 16	4.3, 4.4	
Tuesday	October 21	4.5, 4.6	Quiz 7, Homework #5
Thursday	October 23	4.7, 4.8	
Tuesday	October 28	5.1, 5.2	Quiz 8
Thursday	October 30	5.3, 5.4	Homework #6
Tuesday	November 4	5.5, 5.6	Quiz 9
Thursday	November 6	Review	
Tuesday	November 11	Holiday (Veteran's Day)	
Thursday	November 13	Test 2	Homework #7
Tuesday	November 18	7.1	
Thursday	November 20	7.2	
Tuesday	November 25	7.3	Quiz 10, Homework #8
Thursday	November 27	Holiday (Thanksgiving Day)	
Tuesday	December 2	8.1, 8.2	
Thursday	December 4	8.2	Quiz 11, Homework #9
Tuesday	December 9 Final Exam	Section # 114581: 10:30 am – 1:00 pm Section # 114590: 7:30 – 10:00 pm
