## TEST 3 @ 130 points

Write in a neat and organized fashion. Write your complete solutions on SEPARATE PAPER. You should use a pencil. For an exercise to be complete there needs to be a detailed solution to the problem. Do not just write down an answer. No proof, no credit given! Clearly label each exercise.

1. Solve each equation in $\mathbb{C}$ (the set of complex numbers) by the indicated method.
a) $5(x-2)^{2}+38=0$ by the square root property.
b) $3 x^{2}-2 x+5=0$ by completing the square.
c) $x^{2}+\frac{x}{3}=\frac{3}{2}$ by the quadratic formula.
d) Solve $3 x^{2}+x y+y^{2}=2$ for $y$.
2. Solve the following equations.
a) $2 x^{4}-x^{2}-3=0$
b) $\log _{4}(2 x-1)=3$
c) $3^{x}=8$
d) $\log _{8}(x+5)-\log _{8} 2=1$
e) $5^{x}=3^{2 x-1}$
3. Solve the following inequalities.
a) $x^{2}-6 x+5 \leq 0$
b) $\frac{1}{x+3}<\frac{1}{x-2}$
4. Let $f(x)=3 x-1$ and $g(x)=\frac{3-x}{x+1}$. Answer the following questions:
a) Find $(g \circ f)(x)$.
b) $(f \circ g)(2)$
c) Find $f^{-1}(x)$.
d) Find $g^{-1}(x)$.
5. Simplify the following expressions.
a) $4 \ln x+7 \ln y-3 \ln z$
b) $\frac{1}{2}\left(\log _{5} x+\log _{5} y\right)-2 \log _{5}(x+1)$
c) $\log _{3} 405-\log _{3} 5+\log 5+\log 2$
d) $\log _{4}\left(\log _{2} 16\right)$
6. For the equation given bebw, answer all the questions and graph the function (Be sure to label the axes and all points used). SHOW ALL WORK!

$$
y=-2 x^{2}+x+6
$$

a) What type of curve is this?
b) What is the y-intercept?
c) What is the vertex
d) What are the $x$-intercept(s) (if any)?
e) What is the domain of the function?
f) What is the range of the function?
g) Using the graph above, solve the following inequality: $-2 x^{2}+x+3<0$
h) What is the vertex form of the equation?
7. Graph $f(x)=2^{x}$ and $f^{-1}(x)=\log _{2} x$ on the same coordinate system showing the symmetry about the bisector line $y=x$. Label the axes and all the points.
8) The number of bacteria present in a culture after t hours is given by the formula $N=1000 e^{0.69 t}$.
a) How many bacteria will be there after $1 / 2$ hour?
b) How long will it be before there are $1,000,000$ bacteria?
c) What is the doubling time
9) The owners of a small fruit orchard decide to produce gift baskets as a sideline. The cost per basket for
producing $x$ baskets is $\quad C=0.01 x^{2}-2 x+120$. How many baskets should they produce in order to minimize the cost per basket? What will their total cost be at that production level?
